From 2019-2025, the GFMEDC successfully supported 162 projects which created 2,924 direct jobs, utilized 6.4M square feet of space and injected over \$4.1B in capital investment into the region.

Using economic impact modeling software, we can better understand the direct, indirect and induced ripple effects of this primary-sector growth (ongoing operations impacts + construction impacts) on our region. Because of the GFMEDC's successful projects and their direct and ripple effects, the industries to the right will see the following increase in their sales once expansion projects are at full employment capacity and construction activities are concluded. While varying somewhat by economic sector, recurring impacts year after year represent about 73% of the sales values shown below.

Each year, there are positive residual impacts of each project that carries forward year over year due to continued operations and expanded projects.
